

NETWORK CENTRIC MANUFACTURINGSM **A Low Risk Manufacturing Relocation Solution**

For international companies in need of a U.S. manufacturing presence, the Pittsburgh region provides an alternative to the expensive process of moving or creating new manufacturing operations: Network Centric Manufacturing (NCM).

NCM enterprises increase efficiency and reduce production risks by using a network of reliable, experienced manufacturers to fulfill specific production needs.

DSN Innovations

DSN Innovations is the home of NCM. Based in the Pittsburgh region, this federally-funded center benefits from a century-long regional tradition of advanced manufacturing that is supported by a thriving industry base. DSN Innovations is dedicated to:

- translating existing process models and production-ready designs into a U.S.- based network of existing manufacturers with complementary capabilities; and
- identifying manufacturing risks and recommends mitigation strategies using sophisticated costing, modeling and simulation tools to help your business avoid unnecessary expenses.

The NCM network, administered by DSN Innovations, puts together non-traditional, low-risk, highly agile companies in a supply chain model to meet global manufacturing needs.

“[DSN Innovations] epitomizes the trend to a value chain-driven model of manufacturing.”

– Dan Miklovic, Managing Vice President, Gartner, Inc.

International companies looking for cutting-edge manufacturing solutions and alternatives to traditional relocation strategies should contact DSN Innovations (www.dsninnovations.org) or the Pittsburgh Regional Alliance to learn more.
